## Operation

The TX and TM series of temperature switches offer a completely electronic instrument to detect the increase or decrease of temperature. These switches are used in industrial applications including pipelines and tanks. The RTD sensor provides an extremely reliable and repeatable device at a very cost effective price.

A relay output is standard with options for dual separately adjustable set-points. Remote mounted electronics are available for process temperatures to 900F.

## Applications

- High/Low Temperature Alarm in Pipelines
- High/Low Temperature Alarm in Tanks
- Heater Burn-Out Protection
- Control Heat Tracing on Pipes
- Temperature Alarm in HVAC Systems
- Dual Switch Point for 2 Independent Set-Points
- Optional Sanitary compatibility available
