
Safety Shower and Eye Wash Flow Switch

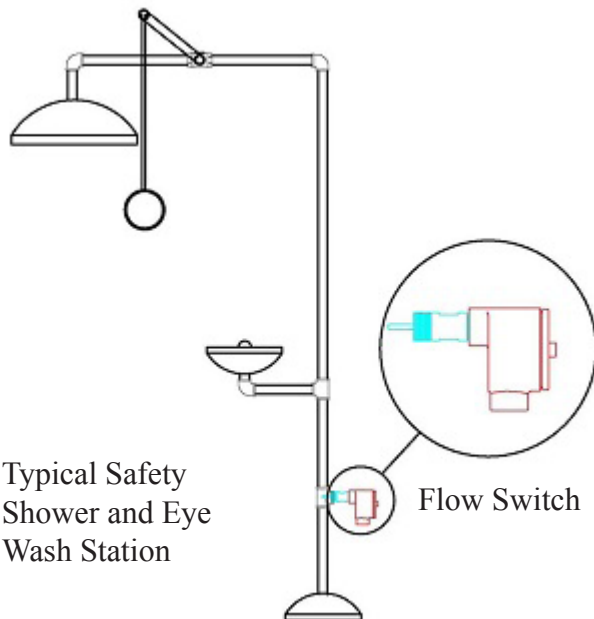

- Reliable No Moving Parts Design
- Rugged Design Withstands High Safety Shower Flow Rates
- Easily Detects 0.4 GPM Eye Wash Flow
- Explosion Proof for Hazardous Areas
- 316L Stainless Steel Sensor
- Large Inventory & Same Day Shipment
- NEMA 4X for Tough Environments

FX Series Flow Switch

[Brochure \(PDF\)](#)
www.ameritrol.com

The FX series flow switch provides reliable service in both safety shower and eye wash station applications. Safety showers require 20 gpm flow rates while eye wash stations only require 0.4 gpm. The FX Series no moving parts design works reliable during high flow safety shower incidents and still easily detects the low flows of an eye wash event. The relay output can be used to sound an alarm, turn on an emergency light or send a signal to a control room for emergency help.

The FX series safety shower and eye wash station flow switches are designed to provide reliability in high and low flow conditions at a very cost effective price.
